

# MB8 MONEY

2019/2020

 **MB8** | m@ney

# The Trouble with Money

## Fiat Solution

- ✓ Government controlled
- ✓ Loss of value if too much is printed
- ✓ Movement controlled by banks
- ✓ Transactions can be costly
- ✓ Bank account necessary
- ✓ Easily manipulated by institutions

## Crypto Solution

- ✓ Decentralised
- ✓ Supply limited by business plan & White Paper
- ✓ Peer to peer transfer - no bank intermediary required
- ✓ Virtually no cost transactions
- ✓ Accessible to unbanked
- ✓ Immutable due to blockchain technology

We already know this...

# The Trouble with Cryptocurrency

## Problem

- ✓ Volatile due to infancy
- ✓ Pump & dump ICO's have ruined reputation - Poor public image
- ✓ Trading can be convoluted & cumbersome for reasons of security
- ✓ Transaction times can be lengthy

## Solution

- ✓ Tradeable, life-changing for early adopters. Stability increasing due to true business usage
- ✓ Increased understanding & awareness has minimised negative impact of previous ICO's
- ✓ Blockchain based KYC & AML requires one time only validation. Also, voice/face biometrics ready to be implemented
- ✓ MB8 is 5x faster than Bitcoin (based on average speeds)

& this is now common knowledge....

# Banks, Fiat & Cryptocurrency

## Banks

The move to digitise money presented new requirements for security

Master programmers could put trusted institutions at risk from the comfort of their own home

Workload is doubled with associated costs increased due to ensuring security of fiat currency in all its different forms

## Crypto Alternative

Easier and more cost effective to build a new system than adapt an old one - no requirement to compromise

Opportunity to improve on the current system and leave behind problems, inefficiencies & weaknesses of the past

Introduce improved security, flexibility, convenience & other benefits made possible by advancements in digital technology

Make currency more reflective of the way consumers spend money in the modern age

Safeguard monetary integrity by limiting supply via Whitepaper & Business Plan - 'Safeguard the Value of Money'

Ensure stability by using blockchain decentralised nature - over 51% of network needs to be breached simultaneously for anyone to be able to compromise the system - with decentralisation this is extremely difficult

**...but this is the real reason we have Blockchain!**
